## JV． S1單相 SCR 簐力調整器使用說明 <br> Single Phase Thyristor Power Regulator－protecting

## I．Characteristics of Product \＆Protection：

－Maximum supply and exterior VR can be adjusted．
－Signal receiving can be adjusted，offer ：4－20 mA／1－5V．
－Over temperature protection，Cooling fan operation manner：Fan Works at $55^{\circ} \mathrm{C}$ of cooling sheet，and stop at $45^{\circ} \mathrm{C}$ ，this design can extend use－life of fan 2－3times．
－R phase fuse broken and detection notify：F＿L LED lights ．
－Load short circuit protecting functions：Reserved high speed fuse of semiconductor semiconductor inside，don＇t be afraid that the load end short circuit．

## II．The LED of the faceplate explanation：

1．Power ：Auxiliary power（AC1 ，AC2）LED lights when input voltage 220VAC $50 / 60 \mathrm{~Hz}$ 【offer 110 VAC to choose，need to tell to the sales】．
2．Run：＂Run＂LED lights when SCR is being output．＂LED＂makes the light and shade change according the quantity of SCR outputing．
3．F＿L（Fuse＿Lose）：＂Fuse＿L＂LED lights when R phase fuse blew．
4．Error ：Abnormal indicat LED．
Temperature of the products is too high．（applied for JK3842S1／3856S1／ 3872S1）

## III．Adjusting knob explanations：

Base ADJ ：Adjusting knob of output basic．
（ Ex－factory standard settings，JK3826S1 is internal setting．）
MAX ADJ ：adjusting knob of output maximum limit．

## IV．Technical specification：

Main power voltage： $220 \mathrm{VAC}, 380 \mathrm{VAC} \pm 10 \%$ ．
Auxiliary voltage： 220 VAC $\pm 10$ \％．
Rated current：26A，42A，56A，72A．Work frequency： $50 \sim 60 \mathrm{~Hz}$ ．
Output type：Angle phase．Output voltage range： $0 \sim 100 \%$ ．
Angle phase input signal： $4-20 \mathrm{~mA}, 1-5 \mathrm{~V}$ ．（manual transmit）
Working environment：$-10^{\circ} \mathrm{C} \sim 50^{\circ} \mathrm{C}$ humidity under $90 \% \mathrm{RH}$ no condensed．

## VI．Suggest wiring and control method：

1．Input control signal $4-20 \mathrm{~mA}$ ， applied for ：JK3826S1。

2．Input control signal $4-20 \mathrm{~mA}$ ， applied for JK3842S1，JK3856S1，JK3827S1。

Please jump E3 and E2
When external VR not be used．

Three phases power used in SCR products． Suggest control wiring diagram．

3．Input control signal 4－20mA，external VR control 。 applied for JK3842S1，JK3856S1，JK3872S1線路。

Ouside VR fuction is extended from panel VR 。 If the panel VR adjusted to $0 \%$ ，that outside VR will no function．

1．Input control signal Setting：
Ex－factory default setting：

## $4 \sim 20 \mathrm{~mA} 50 \mathrm{~Hz}$

$1.14 \sim 20 \mathrm{~mA}$ turn on。
1．2 E3，E2 short ${ }^{\circ}$

$$
0-5 \mathrm{~V} \quad 60 \mathrm{~Hz} \quad \mathrm{SW} 1
$$

## 4～20mA DIP identification

DIP＂1＂up
DIP＂2＂down

2．Press the reset button or remove Terminal $T$ than replug after 5 min ．to reset after the default be repaired．
